

Celebrate **Our** History, Inspire **Our** Future

NBPOL and Papua New Guinea – Moving Forward Together

Since our establishment in 1967, NBPOL has grown alongside Papua New Guinea, sharing in its challenges, celebrating its victories, and contributing to its prosperity. From the birth of our nation in 1975 to our Golden Jubilee In 2025, we remain true to our purpose of Care to Nourish, Dare to Flourish and our vision of becoming Pacific's most sustainable and community-focused agribusiness. Together with our people and partners, we will continue to cultivate growth, empower communities, and safeguard the environment for generations to come.

Happy 50th Independence Day, Papua New Guinea!

Planting Prosperity Towards Independence – Growing Together for the Future

Smallholder Progress

Smallholders are at the heart of our success. Today, more than 17,000 families supply fruit to our mills, empowered through training, access to quality inputs, and fair pricing systems. By strengthening their capacity and supporting RSPO certification, we are helping communities to improve livelihoods, access new markets, and secure a sustainable future for the next generation.

Sugar & Beef Progress

At Ramu Agri-Industries, our sugar and beef operations continue to reach new heights. Through modernised milling, improved irrigation, and integrated cattle-grazing systems, we deliver high-quality sugar and premium beef for the domestic market. Our vertically integrated approach strengthens food security, creates jobs, and contributes to the agricultural diversity and resilience of Papua New Guinea.

Oil Palm Progress

From our roots in West New Britain to operations across Papua New Guinea and the Solomon Islands, NBPOL has grown into a world-class producer of fully traceable and sustainable palm oil. In 2025, we continue to lead with innovation, efficiency, and a steadfast commitment to environmental stewardship. Through mechanisation, precision agriculture, and renewable energy, our mills and plantations deliver premium-quality products while steadily reducing our carbon footprint.

Research & Development Progress

Our R&D teams are shaping the future of agriculture in Papua New Guinea. From developing higher-yielding, disease-resistant palm varieties to advancing soil health and biodiversity conservation, our research is driving greater productivity and resilience. We are also pioneering climate-smart farming practices that protect land, water, and ecosystems, thus safeguarding resources for decades to come.
